JERRY CZERNEL JOINS AIM COMPUTER SOLUTIONS AS VICE PRESIDENT OF OPERATIONS

[FRASER, MICHIGAN, March 18, 2005] -- Senior Program Manager and Principal Consultant Jerry Czernel left EDS/UGSPLM to join AIM Computer Solutions, Inc. of Fraser, Michigan.

“AIM offers a unique challenge, and is a company being discovered” says Czernel of the 20 person software company. AIM has recently been reviewed and accepted by Microsoft as a partner in the small to medium sized automotive production part supplier marketplace. AIM is a certified partner for Microsoft in two major areas of expertise.

“Microsoft is interested in AIM because we offer a complete, integrated solution to the AIAG EDI and Barcode labels required by automotive production part suppliers,” says Czernel. He adds, “Most people think EDI used in retail is directly useable by the small automotive suppliers, but this is not the case. Specialized rules on schedule dates, timings and barcode label information must be correctly interpreted, used and archived throughout the whole advanced planning process.”

Jeff Siciliano, President of AIM says, “We are very excited to have Jerry Czernel as our new VP of Operations. His vast experience is exactly what our company needs to grow our company into a major player in the Small to Mid Size automotive market.”

Czernel was at EDS for 18 years and held a variety of Program Management positions in various manufacturers including McDonnell Douglas Florida Missile Plant, Detroit Diesel and GM's Warren PSIC Center. In addition, Czernel became a Senior Account Executive in the Manufacturing arm of UGSPLM, where he worked until his move to AIM.

“I've enjoyed my time with UGSPLM, and feel that the opportunity at AIM is coming at the right time,” Czernel continues, “my move to AIM is exciting, and our solid forecast tells me the timing is right. Our AIM Vision[®] solution helps the small to medium sized production part supplier compete, and their growth is clearly a plus for AIM, and Michigan.”

About AIM Computer Solutions, Inc.

Michigan-based AIM has grown into the leader for a complete software solution for small to medium sized automotive suppliers. AIM Vision[®] provides a single source for automotive EDI integration into production scheduling complete with demand smoothing to accommodate work schedules, machine repair/refurbish, and other scheduling considerations. “Frozen” demands are then used to generate MRP and CRP reports, fully synchronized with Tier 1 and transportation customer requirements. Other capabilities include outside processing, lot control, finite scheduling, and two levels of tool/workstation scheduling logic, barcode label generation and significant use of operator friendly edit and validation aids.
