

**AIM Computer Solutions, Inc. agrees with value proposition of
Microsoft's Peak Performance Initiative;
Plans to exhibit at the Global Automotive Summit on April 29, 2005**

*AIM drives Peak Performance through the simplification of EDI, RAN, Kanban
demands for small to medium production part suppliers*

Fraser, MI – April 29, 2005 -- AIM Computer Solutions, Inc., a Microsoft ISV who provides a focused ERP solution to small to medium production part automotive suppliers today announced its support of Microsoft's Peak Performance Initiative at the 2005 Global Automotive Summit. The Peak Performance Initiative identifies four core areas that Microsoft and its partners are focused on driving insight and innovation throughout the automotive community.

AIM Computer Solutions, Inc. delivers competitive value to small to medium sized production part automotive suppliers through its fully integrated AIAG based EDI, Barcode and ERP/MMOG solution: AIM Vision®. The solution is directly tied to both Microsoft® Business Solutions financials and the Microsoft SQL framework. In addition, Microsoft SharePoint™ technologies further extends the AIM Vision ERP and supplier release scheduling throughout the entire supply chain.

“Key deliverables of the Microsoft Peak Performance Initiative are centered around what AIM delivers in ‘accelerating insight’ into decisions that are made daily by the production part automotive supplier” says Jerry Czernel, VP of Operations, AIM Computer Solutions. “Most of these decision deal with scheduling issues, which are tied to operations throughout the supply chain. And this [decision support] pertains to both the Tier 1 OEM, and back through other Tier 2 and Tier 3 suppliers. Our ERP system functions like a decision support system, preventing our supplier-customers from getting blind sided, and extending this visibility of demands into the supply base through several alternatives. Microsoft is right on target when it comes to delivering value through collaboration and visibility.”

“AIM Computer Solutions has embraced Microsoft Business Solutions’ partner-driven vertical strategy,” said David Weger, automotive industry senior product manager **with Microsoft Business Solutions**. “AIM provides industry-specific solutions for automotive production part suppliers by applying their deep industry knowledge to our core business applications.”

Based on extensive research and feedback from partners, customers and industry experts, Microsoft's Peak Performance Initiative provides an innovative and cost effective approach that allows automotive customers to take full advantage of their legacy investments while connecting key systems, people and organizations across the automotive supply chain to remove the barriers that stifle innovation and competitiveness.

About AIM Computer Solutions, Inc.

Michigan-based AIM has grown into the leader for a complete software solution for small to medium sized automotive suppliers. AIM Vision® provides a single source for automotive EDI integration into production scheduling complete with demand smoothing to accommodate work schedules, machine repair/refurbish, and other scheduling considerations. “Frozen” demands are then used to generate MRP and CRP reports, fully synchronized with Tier 1 and transportation customer requirements. Other capabilities include outside processing, lot control, finite scheduling, and two levels of tool/workstation scheduling logic, barcode label generation and significant use of operator friendly edit and validation aids. Complete integration into Microsoft® Financials, SQL and new SharePoint technologies extends the AIM Vision® solution throughout the supply chain.
